

Assigned: {Assigned Date}

Due: {Due Date} before (Due Time)

Marks: 20 marks possible

Submission Procedure:

- **Create / debug / test your assignment in Visual Studio**
- Create a **ZIP** file of your CareerCloud solution and upload it to **BlackBoard**.
 - o Please ensure you upload the entire solution
 - o Name your ZIP file according to the guidelines in the '1 – Sundry' slide deck
 - E.g. NET.12-2-Joe-Smith-N#####.zip
- **DO NOT EMAIL YOUR ASSIGNMENT** – The Humber email server will not deliver the assignment and you will not be notified that it was not delivered.

Description:

In this assignment you will create the ADO data layer that will utilize the Pocos created in assignment 1 to create, read, update and delete (CRUD) information to and from a persistent data store.

Steps:

- Using the solution created in assignment 1 (the 'CareerCloud' solution) add a new **class library project** called 'CareerCloud.DataAccessLayer'. **The framework selected should be .NET 8.0 (Long Term Support).**
 - o Inside the 'CareerCloud.DataAccessLayer' project, create an interface called IRepository.
 - o The IRepository definition can be found here: <https://dotnetfiddle.net/I2ggAg>
- Using the 'CareerCloud' solution add a new core class library project called 'CareerCloud.ADODataAccessLayer'.
 - o Add a reference to the 'CareerCloud.Pocos' and the 'CareerCloud.DataAccessLayer' projects.
 - o For each class in the 'CareerCloud.Pocos' project add a class called [Poco class name – 'Poco']Repository to the 'CareerCloud.ADODataAccessLayer' project.
 - Example: the class called 'ApplicantEducationPoco' in the 'CareerCloud.Pocos' project would have a corresponding class called 'ApplicantEducationRepository' in the 'CareerCloud.ADODataAccessLayer' project.
 - Apply the IRepository to each class created in the 'CareerCloud.ADODataAccessLayer' project.
 - Implement all methods dictated by the IRepository interface
 - Example: ApplicantEducationRepository :
IRepository<ApplicantEducationPoco>

Testing Your Code:

You can test your code before submitting. There is a project on GitHub located here:

<https://github.com/johnhinz/CareerCloudCore.UnitTests.Assignment2.git>

DO NOT MODIFY THE UNIT TEST TO MATCH YOUR CODE

- Clone the solution from GitHub using Visual Studio.
- Open the solution.
- Build the test project
 - You should receive an error like the following (these errors are okay):

	Code	Description	Project
✖	CS0234	The type or namespace name 'ADODataAccessLayer' does not exist in the namespace 'CareerCloud' (are you missing an assembly reference?)	CareerCloud.UnitTests.Assignment2
✖	CS0234	The type or namespace name 'Pocos' does not exist in the namespace 'CareerCloud' (are you missing an assembly reference?)	CareerCloud.UnitTests.Assignment2
✖	CS0246	The type or namespace name 'SystemCountryCodePoco' could not be found (are you missing a using directive or an assembly reference?)	CareerCloud.UnitTests.Assignment2
✖	CS0246	The type or namespace name 'ApplicantEducationPoco' could not be found (are you missing a using directive or an assembly reference?)	CareerCloud.UnitTests.Assignment2
✖	CS0246	The type or namespace name 'ApplicantProfilePoco' could not be found (are you missing a using directive or an assembly reference?)	CareerCloud.UnitTests.Assignment2
✖	CS0246	The type or namespace name 'ApplicantJobApplicationPoco' could not be found (are you missing a using directive or an assembly reference?)	CareerCloud.UnitTests.Assignment2
✖	CS0246	The type or namespace name 'CompanyJobPoco' could not be found (are you missing a using directive or an assembly reference?)	CareerCloud.UnitTests.Assignment2
✖	CS0246	The type or namespace name 'CompanyProfilePoco' could not be found (are you missing a using directive or an assembly reference?)	CareerCloud.UnitTests.Assignment2
✖	CS0246	The type or namespace name 'CompanyDescriptionPoco' could not be found (are you missing a using directive or an assembly reference?)	CareerCloud.UnitTests.Assignment2

- Copy the test project folder into your CareerCloud solution folder.
- Add the project to your CareerCloud solution through Visual Studio
 - In your assignments solution explorer window right click and select 'Add' -> 'Existing project'
 - Navigate to the 'CareerCloud.UnitTests.Assignment2.csproj' file you copied previously
- Build the CareerCloud solution.
- Open the Test Explorer window. (Menu: Test -> Windows -> Test Explorer)

You should now be able to run the unit tests on the assignment.
